

Right now, in the **guide frontend**, they actually **do not input the policy yet**. That part is still hard-coded demo data.

The current page only lets the user input provider/API settings here:

```
Provider settings
├── Provider
├── Model
├── Base URL
├── Foundry endpoint
├── API key
├── Foundry bearer token
└── Regulations.gov API key
```

Then the app runs against the fictional policy already built into `backend/run_full_stack_guide.py`.

For the real user flow, I think the very top of the app should have a **“Policy Input”** section before Guided/Rush begins, something like:

POLICY INPUT

```
[ Federal Register URL / Document Number ]
https://www.federalregister.gov/...
```

OR

```
[ Paste policy text ]
```

Paste the policy or rule here...

OR

```
[ Upload document ]
[ Choose file: PDF / TXT / JSON ]
```

```
[ Load Policy ]
```

Then underneath that:

PUBLIC RESPONSE / COMMENTS

```
[ Regulations.gov Docket ID ]
EPA-HQ-...
```

```
[ Fetch comments ]
```

or

```
[ Upload / paste comments ]
```

So the normal user's start-to-finish interaction should really be:

1. Open PolicyTrace
↓

2. Enter Federal Register URL/document number
OR paste text
OR upload document
↓
3. PolicyTrace loads and normalizes it
↓
4. Optional: enter Regulations.gov docket / load comments
↓
5. Choose Guided or Rush
↓
6. Analyze

And the API-key section can stay separate:

AI PROVIDER
Provider: OpenRouter
Model: ...
API Key:

[Use these local settings]

What I would put on the screen

At the top:

POLICY SOURCE	
Federal Register URL or document number	
[_____]	
or paste policy text	
[	]
[	]
or upload a file	
[Choose File]	
[Load Policy]	

Once loaded, show:

Loaded source

Title: Department of ...
Agency: ...
Document number: 2024-20529
Characters: 84,213
Source status: ready

Then:

[Begin Guided Analysis] [Run Rush Analysis]

So the key point is: **the current reference frontend does not yet have that input box.** It jumps in after the policy has already been loaded.

That is one of the next things we should add to our guide if we want it to demonstrate the actual product from **user enters policy** → **final brief**, rather than starting halfway through.
